After a lifetime of using the classic version of Photoshop, Adobe was smart to recognize the need to provide a CS6 workflow in Photoshop Elements, an app pioneered on it. Plus, since the day I bought my first 'Mac, Elements was my preference. Now, after three years with Elements 20's new flexible crop tool, Adobe keeps the crop tool in the latest update, making perfect sense. It's like Apple asked, "What if we give the Pinch tool the way we gave the Cropping tool a couple years ago." It's cool. If you care to read the whole review on the Adobe website, please check out Creative Cow (the website of Ozgur Irperdal). With so many glowing comments, it looks like Adobe and Creative Cow have a longstanding partnership. However, the app itself is improved a lot with the latest update (2.2), so not all the praise is undeserved. I do really appreciate the fact that they so evidently care with the upcoming update. As an artist, as a designer, I'm pretty happy with the latest version of Photoshop Sketch. As a matter of fact, I'm willing to swap it back to Photoshop if Photoshop CC stops getting better.
